

ENERGY CONSERVATION POLICY

The Board embraces energy conservation and believes it to be our responsibility to ensure that every reasonable effort is made to conserve energy and natural resources while exercising sound financial management.

We recognize the importance of adopting an energy conservation policy to govern this program. We also affirm the implementation of this policy will be the joint responsibility of the board, administration, faculty, staff, students, and support personnel. Success is based on cooperation amid all groups.

To ensure the overall success of our behavior-based energy conservation program, the following areas will be emphasized:

1. A designated school district Energy Manager will be accountable for energy conservation on school district property.
2. All personnel at all school district buildings are expected to make a positive contribution to maximize energy conservation and produce real energy savings.
3. Accurate records of energy consumption and cost will be maintained by the Energy Manager for each school district building to provide verifiable performance results on the goals and progress of the energy conservation program.

Further, to promote a safe, healthy learning environment and to complement the energy conservation program, each school building shall review and adhere to the preventive maintenance and monitoring plan administered by the school district physical plant for its facilities and systems, including HVAC, building envelope, and moisture management.

- A copy of this policy and attached procedure(s) should be disseminated throughout the district and copies are to be placed in public areas to include, but not limited to, all bulletin boards, faculty lounges, etc.
